

Fix Persian Datepicker & Dashboard Calendar

jquery.ui.datepicker

intro

In this method we will change the content of the mentioned library so that we don't have to change the content of the pages and load the scripts and links.

1. Fix Persian Datepicker with JalaliDatepicker

JavaScript Section

- Copy `jquery.ui.datepicker-cc.js` and `jquery.ui.datepicker-cc-fa.js`
- In the root of the project (`IstgOfficeAutomation`) go to `/Scripts/lib/jquery.ui/` or `SUBSYSTEM/Uniform/js/` where `jquery.ui.datepicker-cc.js` and `jquery.ui.datepicker-cc-fa.js` exist paste the copied files.

CSS Section

- Copy `jalalidatepicker.min.css` content and paste it at the end of a CSS file that loads in every page or desired page. for instance you can add these CSS content to `/Content/template/template.css` or in older versions `jquery.ui.custom.css` .

Note: The file you choose varies from one version to another. you can inspect the page.

2. Update dashboard's calendar

- Copy `dashboard-widget-calender` files `component.js` , `style.css` , `template.html`
- Paste in this path `\workflow\Uniform\Scripts\components\dashboard\widgets\dashboard-widget-calender`
